## Unit 11: Ch 16 - Flow of Energy \& Specific Heat

THERMOCHEMISTRY:
$>$ DEFINITION - Study of $\qquad$ (heat) changes in $\qquad$ reactions and
$\qquad$ .

HEAT:
> DEFINITION - Transfer of $\qquad$ between $\qquad$ and $\qquad$
due to $\qquad$ differences.

- SYMBOL: $\qquad$
- Heat flows from $\qquad$ $\rightarrow$ $\qquad$

## ENDOTHERMIC REACTIONS:

$>$ The system $\qquad$ heat energy $\operatorname{FROM}$ the $\qquad$ .

- The system $\qquad$ energy as the surrounding $\qquad$ .

## EXOTHERMIC REACTIONS:

$>$ The system $\qquad$ heat energy $\boldsymbol{T O}$ the $\qquad$ .

- The system $\qquad$ energy and the surrounding $\qquad$ up.

## HEAT CALORIE:

$>$ DEFINITION - $\qquad$ of heat needed to raise the $\qquad$ of
$\qquad$ of pure $\qquad$ by $\qquad$ .
$\bigcirc \ldots=$ SI unit of heat where $\qquad$ $=$ $\qquad$

HEAT CAPACITY:
$>$ DEFINITION $\qquad$ of heat needed to raise the $\qquad$ of $\qquad$
object by $\qquad$ .

- Depends on the $\qquad$ and chemical $\qquad$ .

## SPECIFIC HEAT CAPACITY:

$>$ DEFINITION $\qquad$ of heat needed to raise the $\qquad$ of $\qquad$
of $\qquad$ object by $\qquad$ .

## CALCULATING HEAT ENERGY:

> FORMULA: $\qquad$

- $q=$ $\qquad$ $\rightarrow$ Joules (J), kiloJoules (kJ), calories (cal)
- $m=$ $\qquad$ $\rightarrow$ grams
- $C_{p}=$ $\qquad$ $\rightarrow \mathrm{J} / \mathrm{g}^{\circ} \mathrm{C} \quad$ OR $\mathrm{cal} / \mathrm{g}^{\circ} \mathrm{C}$
- $\Delta T=$ $\qquad$ $\rightarrow\left(\Delta T=T_{f}-T_{i}\right)$

## PRACTICE PROBLEMS:

1) How much heat (J) is required to reduce temperature of 5.50 grams of water from $45.0^{\circ} \mathrm{C}$ to $15.0^{\circ} \mathrm{C}$ ?
2) What is specific heat of a metal that absorbs 205 J when 15.0 grams increases from $25.0^{\circ} \mathrm{C}$ to $60.0^{\circ} \mathrm{C}$ ? What is the identity of the metal?
3) If 850 . calories of heat are applied to 250 . grams of water, what is the change in temperature? ( $C_{\text {water }}=1.00 \mathrm{cal} / \mathrm{g}^{\circ} \mathrm{C}$ )
