## Unit 2: All Practice

Name: $\qquad$
Period: $\qquad$ Date: $\qquad$

Purpose: This exercise reinforces electron sublevels and all of the methods used to express electron configurations (Long Hand, Orbital Notation, Noble Gas Notation). You will also explore how they are related to the Periodic Table.

The Periodic Table shown below indicates the sublevel into which the OUTERMOST, or LAST electron(s) are placed for each element, also known as VALENCE ELECTRONS. For example, Calcium has its outermost electrons placed in the 4s sublevel.

1. Name two (2) elements in which the outermost (last) electron(s) to be added are placed in the " 5 s " sublevel.
2. How many maximum electrons can be placed in the " 5 f " sublevel? How do you know?
3. Name two (2) elements for which the outermost (last) electron(s) to be added are placed in the " $\mathbf{3 p}$ " sublevel.
4. List $\underline{\text { ALL }}$ elements with six (6) electrons in the outermost " $\mathbf{p}$ " sublevel (valence electrons).
5. Name two (2) elements for which the outermost (last) electron(s) to be added are placed in the " 3 s " sublevel.
6. How many orbitals are placed in the " 4 d " sublevel? How do you know?
7. A total of 18 electrons can be placed in the $3^{\text {rd }}$ energy level. Explain why. (Do not just simply say $\mathbf{2 n} \mathbf{n}^{\mathbf{2}}$ )
8. How many total orbitals are used (containing at least one electron) in $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{2}$ ? Explain.
9. Determine which element is associated with each long-hand electron configuration notation in the table below.

| Long-Hand Electron configuration Notation | Element (Symbol) |
| :--- | :--- |
| $1 s^{2} 2 s^{1}$ |  |
| $1 s^{2} 2 s^{2} 2 p^{3}$ |  |
| $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{5}$ |  |
| $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{6}$ |  |
| $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{2}$ |  |
| $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{6} 5 s^{2} 4 d^{10} 5 p^{4}$ |  |

10. Refer to the following electron configuration and answer the questions that follow: $\rightarrow$
a. How many total electrons does this element have? $\rightarrow$ $\qquad$
b. What element is this? $\rightarrow$ $\qquad$
c. How many energy levels are represented? $\rightarrow$ $\qquad$
d. How many sublevels are represented? $\rightarrow$ $\qquad$
e. How many total orbitals are represented? $\rightarrow$ $\qquad$
11. Write the long-hand electron configuration notation for the following elements:
a. Silicon $=$ $\qquad$
b. Calcium Cation $=$ $\qquad$
c. Tungsten $=$ $\qquad$
12. Write the orbital (diagram) notation for the following elements:
a. Bromine $=$ $\qquad$
b. Cesium = $\qquad$
c. Neon $=$ $\qquad$
13. Write the noble gas notation (short hand method) for the following elements:
a. Barium = $\qquad$
b. Sulfur = $\qquad$
c. Lead = $\qquad$
14. Determine which elements are denoted by the following electron configurations. Include element name with correct spelling AND element symbol in parentheses.
a. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{2}$
b. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{6}$
c. $\quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{6} 5 s^{2} 4 d^{8}$
15. Determine whether the following electron configurations are VALID or INVALID. If invalid, CIRCLE the source of the error AND rewrite the correct electron configuration in the space provided. (Retain same number of electrons as the original configuration)
a. $\quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 4 d^{7}$
i. Correct electron configuration: $\qquad$
b. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{2}$
i. Correct electron configuration: $\qquad$
c. $\quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{6} 5 s^{2} 4 d^{10} 5 p^{6} 6 s^{2} 4 f^{14} 5 d^{10} 6 p^{6} 7 s^{2} 5 f^{12} 7 s^{2} 5 f^{0}$
i. Correct electron configuration: $\qquad$
16. Complete the following table:

| Isotope Symbol | Charge | Mass \# | \# of Protons | \# of Neutrons | \# of Electrons |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ${ }^{54} \mathrm{Fe}$ |  |  |  |  |  |
|  |  |  |  |  | 6 |
| ${ }^{10} \mathrm{Be}^{2+}$ |  | 24 |  |  |  |
| $\mathrm{Au}^{3+}$ |  | 54 | 25 | 84 |  |

## 17. Atomic Spectra:

a. Excited aluminum atoms may emit radiation having a wavelength of 475 nm . What is the frequency? $\left(1 \mathrm{~m}=10^{9} \mathrm{~nm}\right)$
b. A radio broadcasting station has a frequency of 105.1 MHz . Find the wavelength in meters. ( $1 \mathrm{MHz}=10^{6} \mathrm{~Hz}$ )
c. What is the energy of a photon of light whose wavelength is $4.85 \times 10^{-7} \mathrm{~m}$ ?
18. Nuclear Reactions and Balancing: Balance each nuclear reaction by filling in the missing particle in each case.
a) $14^{35} \mathrm{Si} \rightarrow-1^{0} \mathrm{e}+\ldots$
c) $92{ }^{238} \mathrm{U} \rightarrow{ }_{2}^{4} \mathrm{He}+$ $\qquad$ - $\qquad$
b) $53^{110} \mathrm{I} \rightarrow$ __ $+51^{106} \mathrm{Sb}$
d) $56^{140} \mathrm{Ba} \rightarrow$ _ $+{ }_{57}{ }^{140} \mathrm{La}$

Half-Life: Solve each Half-Life problem from the given information and show all work for full credit.
19. A meteorite strikes Earth in western Wyoming. Chemical analysis shows that it contains 44.6 kilograms of radioactive Iron-59. How many kilograms (kg) of this isotope will remain in the meteorite after 220 days? The half-life of Iron-59 is 44.0 days.
20. A sample of Gallium- 67 was ordered by a research laboratory 75.0 hours ago, with an original mass of 492 grams. When it was first received in the lab, the sample had a mass of 15.375 grams. What is the half-life of Gallium-67?
