

## Shoreline Processes

Please complete the crossword puzzle below

**Across:**

1. are narrow sandbars parallel to, but separated from the coast at distances from 3 to 30 kilometers offshore
3. a sandbar that completely crosses a bay sealing it off from the open ocean
4. currents that flow parallel to the shore and move large amounts of sediment along the shore
5. shoreline features that originate primarily from the work of erosion
7. structures that are built to protect a coast from erosion or to prevent the movement of sand along a beach
13. is the addition of large quantities of sand to the beach system
15. result from the cutting action of the surf against the base of coastal land

**Down:**

2. is a ridge of sand that connects an island to the mainland or to another island
6. the way a wave can alter a landform due to the constant contact of the breaking of a wave
8. relatively flat benchlike surface that is left behind by a receding cliff
9. an isolated remnant on the wave-cut platform falls in
10. is the bending of waves, and it plays an important part in shoreline processes
11. elongated ridge of sand that projects from the land into the mouth of an adjacent bay
12. the sawing and grinding action of rock fragments in the water
14. when two sea caves on opposite sides of a headland unite
16. sediment eroded from the beach and is transported along the shore and leaves behind deposited areas
